

JSI™ WATER LEAK AND SHUT OFF TECHNOLOGY

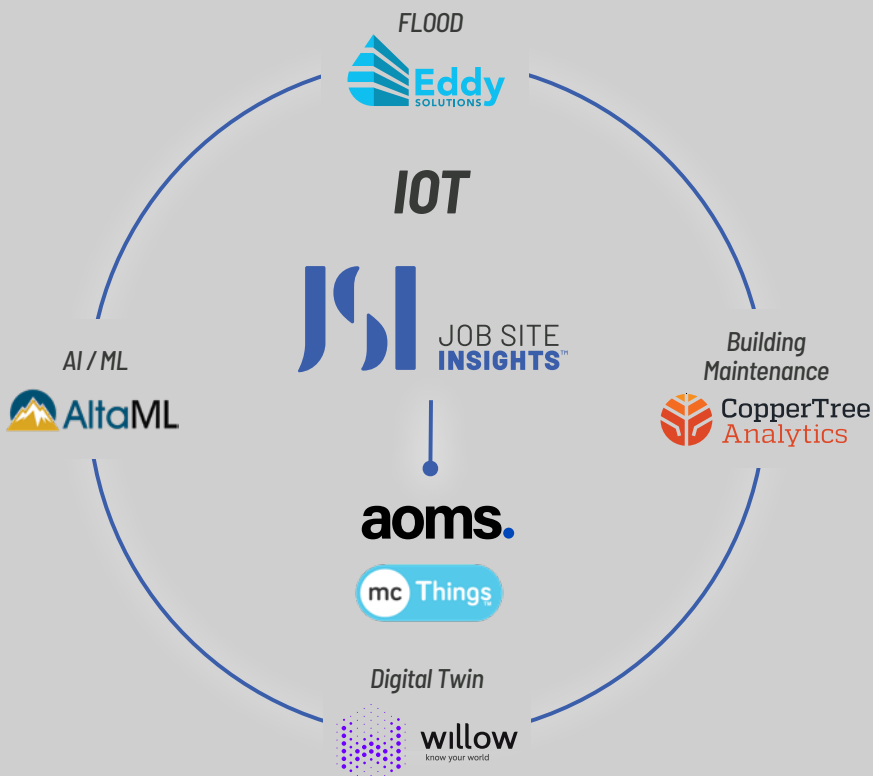

Job Site Insights™ (JSI™) incorporates specialized IoT technologies from leading technology companies into a single pane view of a construction project. JSI turns construction into smart construction: real-time analytics into real-world results.

WHAT IS JSI

Job Site Insights is a smart IoT construction platform bringing digital sensor and analytics capabilities to construction's workforce. IoT sensors monitor vital construction conditions and alert job site personnel to adverse conditions that can lead to costly damages and rework. JSI virtualizes and models a job site, mapping sensors, equipment, assets and people to a single view accessible from any PC or mobile device.

JSI BENEFITS

- Reduced energy usage and costs
- Increased quality and safety
- Reduced rework costs and warranty claims
- Enhanced productivity and shortened construction schedules
- Reduced insurance deductibles and premiums
- Efficient and precise building commissioning and turnover
- Eliminates tedious manual labour

THE BIGGEST CHALLENGE IN CONSTRUCTION AND FINISHED CONSTRUCTION – AND OFTEN THE MOST COSTLY – IS WATER DAMAGE.

Eddy Solutions smart water monitoring and leak mitigation technologies integrate into JSI to bring integral water protection to the construction and post-construction phases. With Eddy, JSI can monitor, control and conserve water usage, protecting the building and critical systems against the risk of water damage during construction.

Eddy's smart suite of products can continue protecting a client's building and tenants post-construction, ensuring a smart construction building is smart for the future.

EDDY BENEFITS

- Reduces property and/or environmental damage and associated rework costs
- Allows for insurance incentives such as rebates and discounts on deductibles and premiums
- Reduces construction schedule disruptions
- Reduces tenant and business disruptions
- Designed for all stages of a building's lifecycle
- Helps maintain asset value
- Brings peace of mind to owners and residents

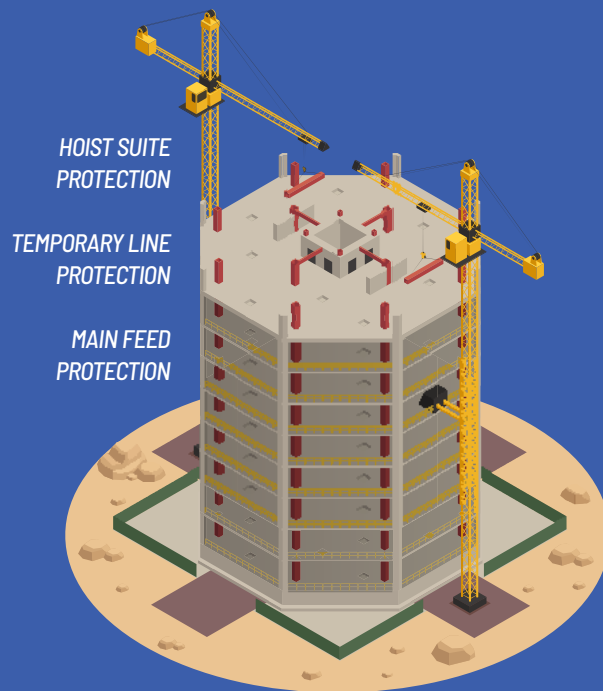

WATER DAMAGE CAN BE PREVENTED.

How? The Eddy Solutions platform protects structures from leaks and floods with smart water monitoring technology, during construction and post-construction.

FEATURES

- Presence of water detection, humidity and temperature monitoring
- Anomalous behaviour and issue alerts through JSI
- Automatic and remote water meter shut off
- Integration with existing meters to track consumption
- Integration with shutoff valve for large pipes
- Custom dashboards and real-time analytics
- 24/7 monitoring support
